

Manufacturing Date Codes

Date codes are used to determine when a product was manufactured.

In the past ULT has used different types of date codes for different products.

These have been consolidated so that all ballasts manufactured by ULT utilize the same ten-digit date code shown to the right.

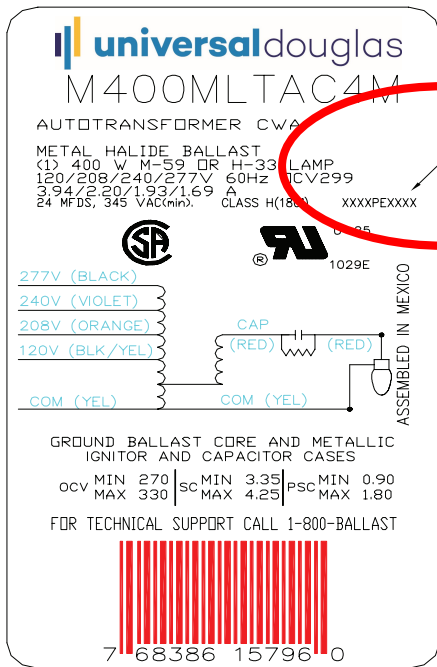

Example

0 5 1 8 M 2 3 1 4 B

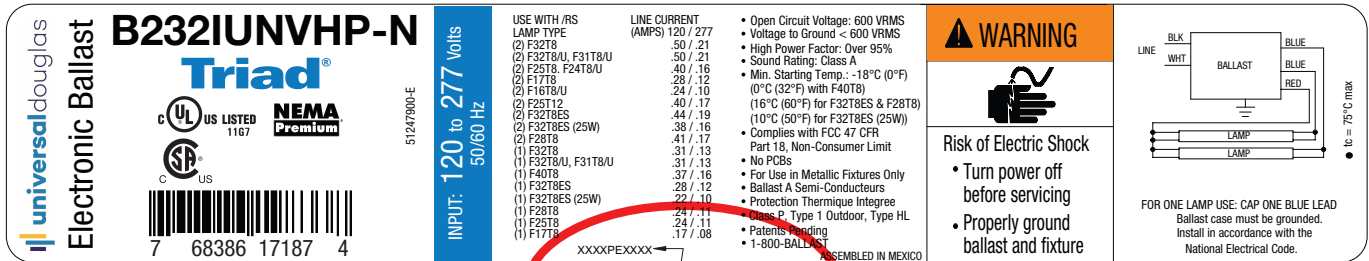

The date code can be found printed on the product label.

ONLY the first four digits are required when communicating with ULT. The first two digits indicate the year while the 3rd and 4th digits indicate the week of manufacture.

The other six digits are ULT internal codes used to identify other specifics about the date of manufacture...day of week, shift, etc.

These drawings indicate typical locations of date codes on the products labels.
