

WSW-LCD - Dialog LCD Switch Station

Project Name: _____
 Part Numbers: _____ Date: _____

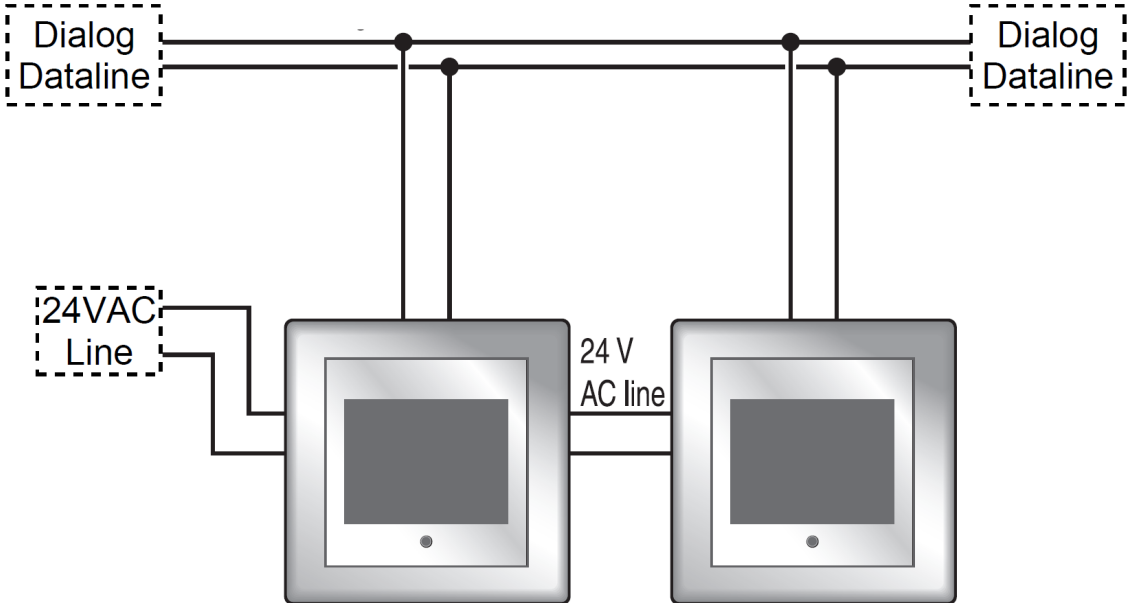

Features

- Two-gang sized LCD switch station
- Pre-programmed and configured for single room or partition room control system
- Works with Dialog centralized lighting control system
- Backlight switches OFF automatically after 10 seconds of inactivity

The Dialog LCD Switch Station is a networked Touch Screen Switch Station for single room wall station or for partitioned rooms. For single rooms the LCD interface provides a modern switch station with user interface. For partitioned room functionality, one switch is used in each side of the partition.

Typical Applications: A contact input device is used to recognize the status (open or closed) of the partition. When the partition is closed, each switch will only control the lights in its respective area. With the partition open, both switches become a master switch to control the entire area.

PART NUMBER	DESCRIPTION
WSW-LCD	Dialog LCD Switch Station and Bezel
